## Follow the instruction to set up the configuration in order to receive company news from RapidAPI within the application

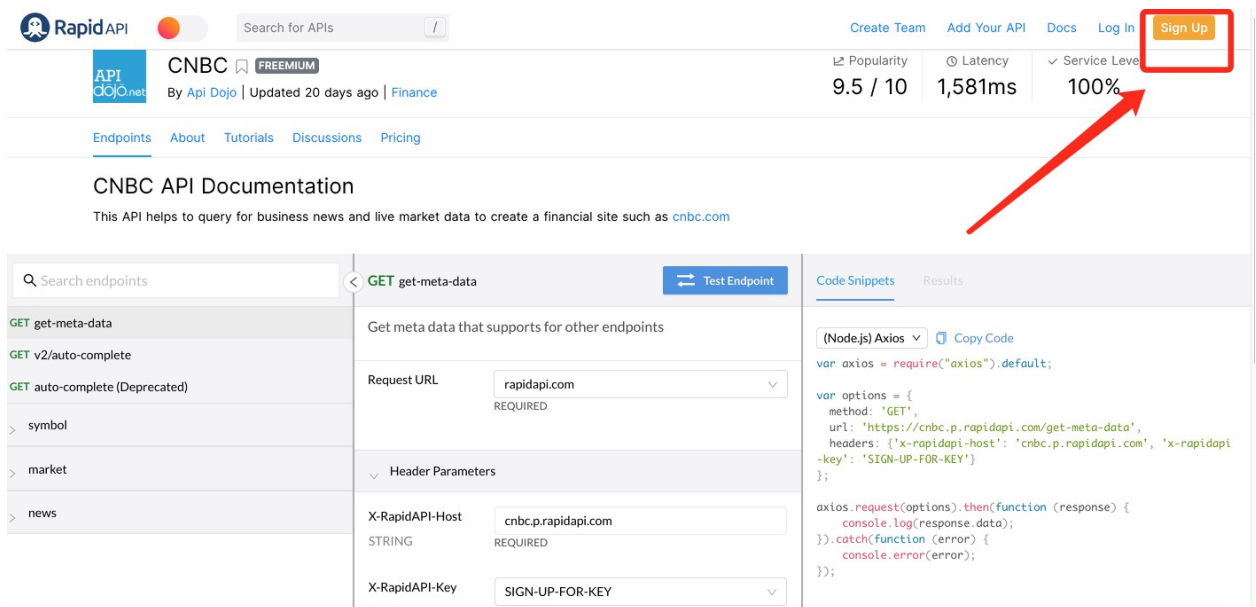

1. Update your google Chrome to version 94
2. Go to <https://rapidapi.com/apidojo/api/cnbc/>
3. Find the “news” on the left column of the page, and expand the option

4. On the expanded column, find the “news/v2/list-by-symbol” and click on it

5. If you haven't signed up/log into this website, Please sign up/log in with your Google / Facebook or any other method that works for you; If you have already done so, please skip to step 5.

6. After sign in with your account, find the following content on the right part of the website, and follow the steps below:

7. In the middle column of the page, find the Header "X-RapidAPI-Key", and copy its code.  
**MAKE SURE:** you click on the code first, then right-click on the pop-up option and select "copy"

REQUIRED

8. You are almost there! Now open up the config.py file in Python window, and paste your code as the value for 'cnbc\_api\_key'.

```
1 config = {  
2     'cnbc_api_key': "d8cb8f820emsh18db97648694a5bp1920fbjsneab9c02820ba",  
3     'storage_encoding': 'utf-8'  
4 }  
5  
6
```

Replace the value of the api\_key with the value you just copied

9. Install the Selenium by running the following command(ignore the quotation marks)

“conda install -c conda-forge selenium”

10. Now you can run the application by running the “app.py” file
